AMENDMENTS TO THE CLAIMS

Claims 2-5, 7-14, 17-22 and 26 are amended, as shown below. A complete listing of the claims in this case, with their status, is shown below.

1 (CANCELLED)

- 2. (Currently amended) The composition of claim 25, comprising The method of claim 20, wherein the composition comprises alloactivated lymphocytes from at least two human donors different from the patient.
- 3. (Currently amended) The composition of claim 2, comprising The method of claim 2, wherein the composition comprises alloactivated lymphocytes from at least three human donors different from the patient.
- 4. (Currently amended) The composition of claim 3, comprising The method of claim 2, wherein the composition comprises alloactivated lymphocytes from at least four human donors different from the patient.
- 5. (Currently amended) The composition of claim 25, further comprising The method of claim 20, wherein the composition comprises lymphocytes from the patient that have been inactivated.
- 6. (CANCELLED)
- 7. (Currently amended) The composition of claim 6, The method of claim 22, wherein the tumor-associated antigen is expressed on a tumor cell present in the composition.
- 8. (Currently amended) The composition of claim 25, wherein the lymphocytes are alloactivated The method of claim 20, wherein the lymphocytes in the composition have been alloactivated by coculturing with human cells ex vivo expressing HLA-DR antigens that are allogeneic to both HLA-DR antigens on the lymphocytes.
- 9. (Currently amended) The composition of claim 25, wherein the lymphocytes are alloactivated The method of claim 20, wherein the lymphocytes in the composition have been alloactivated by coculturing with allogeneic human cells ex vivo for a time whereby the lymphocytes become sufficiently alloactivated to be effective in eliciting an anti-tumor immunological response when administered to a human.
- 10. (Currently amended) The composition of claim 25, wherein the lymphocytes are alloactivated The method of claim 20, wherein the lymphocytes in the composition have been alloactivated by coculturing with allogeneic human cells ex vivo for a time whereby the lymphocytes become sufficiently alloactivated to be effective in extending life expectancy or causing progressive reduction in tumor mass when administered to a human having a tumor.

Atty Dkt. No.: IRVN-005CIP

USSN: 09/771,263

11. (Currently amended) The composition of claim 25, wherein the lymphocytes are alloactivated The method of claim 20, wherein the lymphocytes in the composition have been alloactivated by coculturing with allogeneic human cells ex vivo until about the time when secretion of IFN-γ by the alloactivated lymphocytes is highest.

- 12. (Currently amended) The composition of claim 25, wherein the lymphocytes are alloactivated The method of claim 20, wherein the lymphocytes in the composition have been alloactivated by coculturing with allogeneic human cells ex vivo until about the time when secretion of IL-2 by the alloactivated lymphocytes is highest.
- 13. (Currently amended) The composition of claim 25, wherein the lymphocytes are alloactivated The method of claim 20, wherein the lymphocytes in the composition have been alloactivated by coculturing with allogeneic human cells ex vivo for between about 12 hours and 5 days.
- 14. (Currently amended) The composition of claim 25, wherein the lymphocytes are alloactivated The method of claim 20, wherein the lymphocytes in the composition have been alloactivated by coculturing with allogeneic human cells ex vivo for between about 24 and 72 hours.
- 15. (Cancelled)
- 16. (Cancelled)
- 17. (Currently amended) The device of claim 16, which is method of claim 20, wherein the composition is administered using an injection needle.
- 18. (Currently amended) The device of claim 16, which is suitable for positioning by method of claim 20, wherein the composition is administered using ultrasound guided endoscopy.
- 19. (Currently amended) A method for treating cancer in a human patient, comprising administering to the patient the pharmaceutical composition of claim 25

 a pharmaceutical composition comprising alloactivated lymphocytes from a donor who is unrelated to the patient in a compatible pharmaceutical excipient.
- 20. (Currently amended) A method for eliciting an anti-tumor immunological response in a human patient, comprising administering to the patient the pharmaceutical composition of claim 25 a pharmaceutical composition comprising alloactivated lymphocytes from a donor who is unrelated to the patient in a compatible pharmaceutical excipient.
- 21. (Currently amended) A method for treating cancer in a human patient, comprising administering to the patient the pharmaceutical composition of claim 6

 a pharmaceutical composition comprising stimulated lymphocytes and a tumor associated antigen in a compatible pharmaceutical excipient.

Atty Dkt. No.: IRVN-005CIP

USSN: 09/771,263

22. (Currently amended) A method for eliciting an anti-tumor immunological response in a human patient, comprising administering to the patient the pharmaceutical composition of claim 6 a pharmaceutical composition comprising stimulated lymphocytes and a tumor associated antigen in a compatible pharmaceutical excipient.

- 23. (Original) The method of claim 19, wherein the pharmaceutical composition is administered at or around the site of a solid tumor in the patient.
- 24. (Original) The method of claim 21, wherein the pharmaceutical composition is administered at a site distal to the tumor.
- 25. (CANCELLED)
- 26. (Currently amended) The composition of claim 6, which The method of claim 22, wherein the composition is formulated for subcutaneous or intramuscular administration, wherein administration of the composition at a site distal to the tumor elicits an immunological response by the patient against the tumor.
